MEMBER PROTOCOL 2026

THE INSTITUTIONAL MARKET STRUCTURE COMMAND GUIDE

Welcome to the elite 1%. This guide outlines the exact protocols for navigating the Zen Pips ecosystem—from Telegram alerts to automated MT5 execution and AI-driven chart analysis.

01. THE ECOSYSTEM

Telegram Channel

Your primary alert source. Instant notifications for Entry, SL, and multiple TP levels.

Web Command Center

Your central hub for journaling, education, and real-time portfolio analytics.

The MT5 Bridge

Automated copier linking our institutional signals directly to your brokerage account.

02. SIGNAL PROTOCOL

Our signals are high-probability entries based on Institutional Orderflow and Liquidity Sweeps. Here is how to execute them correctly:

🚨 **ZEN PIPS VIP ALERT**

📊 **Pair:** XAU/USD

🎯 **Action:** BUY LIMIT

🕒 **Timeframe:** 15m (NY Session)

🔽 ENTRY: 2410.50

🚫 SL: 2405.00

✅ TP 1: 2415.50 (+50 Pips)

✅ TP 2: 2422.00 (+115 Pips)

Example of an institutional signal. Note the clear Entry, SL, and multiple Take Profit levels.

The Rule of Phase Extraction

- **TP1 HIT:** Secure 50% partial profits and MOVE SL TO BREAKEVEN (Entry). The trade is now risk-free.
- **TP2 HIT:** Secure the remaining 50% or trail SL to TP1 to capture maximum trend extension.
- **TP3 HIT:** Full extraction. Exit market and step away from the charts.

⚠️ **WARNING: We never risk more than 1-2% of equity per trade. Discipline is more important than the signal itself.**

03. WEB MASTERY

The Institutional Journal

Every trade must be logged. Tracking your pips and emotional state is the only way to professional consistency.

The Education Vault

Access hours of institutional content (SMC, ICT, Psychology) to build your own technical edge.

Bridge Analytics

Connect your HFM account via your 8-digit Login ID. 100% cloud-automated synchronization.

04. AI VISION INTELLIGENCE

Our proprietary **Zen Vision Engine** allows you to upload any chart screenshot for instant institutional structure analysis.

1. UPLOAD TRADINGVIEW SCREENSHOT
2. AI IDENTIFIES BOS/CHOCH/FVG
3. GET PROBABILISTIC ALPHA BIAS
